

OPEN-SOURCE FURNITURE DESIGN

PROJECT 0 : Dream Desk

A minimalist but functional study desk designed for small rooms.

Designed by: Misbah M
Built by: Local Carpenter

Version 1.0 · 22/08/2026

License: CERN-OHL-P-2.0

1. Introduction & Design Intent

Describe why you designed this piece — the problem, the gap, or the personal need that started it. This is the story behind the project.

1.1 Motivation

I was deeply inspired by woodworking creators I discovered through social media. Seeing people transform raw materials into functional and thoughtfully designed pieces of furniture made me want to explore woodworking and furniture design myself.

1.2 Design Goals

Minimalist but functional

1.3 Who This Is For

Creators, aspiring engineers, makers, and anyone interested in furniture design.

2. Project Overview

2.1 Short Description

This is a desk that looks simple while providing the workspace of a conventional desk. It is made primarily from mahogany wood.

2.2 Key Features

- *Aesthetically pleasing and minimal*
- *Spacious drawers and a large shelf*
- *A comparatively large workspace*

3. Design Process — From Blender to Reality

3.2 Design Iterations

The design was changed twice during the development process. Earlier versions either felt outdated or became unnecessarily complicated, so the design was refined toward a simpler and more functional result.

3.3 From Model to Carpenter

The 3D model was shown to the carpenter several times. This allowed us to identify and adjust elements that were difficult or impractical to build physically.

4. Specifications

4.1 Overall Dimensions

The measurements documented here are approximate as-built/reference dimensions. The purpose of the original model was to communicate the design intent rather than require an exact one-to-one replication. Minor variations were made during fabrication based on practical woodworking considerations.

Part / Section	Length	Width	Height / Thickness
Long Side	200cm	60cm	2cm
Short Side	90cm	60cm	2cm
Leg			80cm
Drawer (Large)	70cm	45cm	10cm
Drawer (Small)	45cm	45cm	10cm

4.2 Materials Used

The major material used was mahogany wood.

5. Construction Notes

5.1 Build Sequence

The desk was built in three main parts: (1) the longest side, (2) the shortest side, and (3) the shelf. This approach made the individual pieces easier to carry and allowed the desk to be assembled again at its final location, similar to assembling separate building blocks.

5.2 Joinery / Technique Notes

Nails and glue were used to join the pieces together.

5.3 Tips & Things to Watch Out For

Even though the desk was divided into separate pieces, I needed help carrying them. Do not hesitate to ask for help when handling large or heavy components.

6. Gallery — Render vs. Reality

Compare the Blender design with the finished physical desk using matching views. Place the render and corresponding real photo side by side where possible.

7. License

This design is released as open source under the CERN Open Hardware Licence Version 2 — Permissive (CERN-OHL-P-2.0). Anyone is free to use, study, modify, manufacture, distribute, and sell products based on this design, subject to the terms of the licence.

Repository: <https://github.com/misbahmechery/Dream-Desk>

8. Known Limitations

This is the first physical version of the design. The Blender model represents the original design intent, while the final physical desk includes adjustments made during fabrication in collaboration with the carpenter. Some dimensions and construction details may therefore differ slightly from the original model.

9. Future Improvements

Possible future improvements include a flat-pack version, alternative wood options, additional storage, and other refinements based on experience with the first physical version.
